Studies

Computer science and computer science for business administration systems can be studied at numerous universities and technical colleges in Germany. The Schmalkalden University of Applied Sciences offers its students optimal conditions, not only as regards IT equipment.

One major advantage which the Schmalkalden University of Applied Sciences possesses over university studies is that of a practically orientated education. As a supplement to theoretical instruction, the study regulations guidelines provide for placement semesters, in which students already perform interesting and important tasks. These experiences provide optimal initial conditions for job entry.

Schmalkalden's Department of Computer Science is among the leading computer science departments in Germany.

Computer Science and Computer Science for Business Administration Program graduates work in practically all industries and are involved in the development, the set-up and expansion of informatics systems, graphics / multimedia and expert systems.
